

Point-of-Use Water Operating Benchmark

PAGE 1 | ESTIMATES

SUBVERTICAL LENS

The core archetype is Quench's workplace point-of-use model: installed, provider-owned filtration equipment for a recurring fee. Route density and recurring billing support margins, while equipment ownership, service intensity and customer-site turnover constrain conversion and tenure.

METRIC	ESTIMATE	ASSERTION	CONFIDENCE
Revenue growth	8%	The 8% estimate sits below Quench's 13.6% organic growth in 2019 because that result is dated and current workplace demand is more exposed to office occupancy. Primo's Refill/Filtration growth is not a clean filtration-only measure.	MEDIUM
EBITDA margin	28%	The 28% estimate is anchored directly to Quench's 2019 result of \$32.4 million of EBITDA on \$115.2 million of revenue. Recurring fees support the margin, while technicians, travel, filters, sanitation and repairs constrain it.	MEDIUM
Maintenance capex / revenue	Not estimated	Sustaining capital should rise with provider-owned unit age, filter and sanitation frequency, service-call intensity and a dispersed route footprint. It should fall with standardized long-life equipment, dense routes, high reuse after redeployment and customer-funded site work.	LOW
Customer tenor INITIAL / EFFECTIVE	Initial / effective 1-12 mos / 6 yrs	The short initial term reflects Quench's primarily month-to-month rentals and Primo's flexible cancellation language. Six years is a modeled effective-tenure assumption based on plumbing, recurring service and multi-unit relationships; customer churn cohorts are unavailable.	MEDIUM
Utilization exposure	Moderate overall	Exposure is Moderate because fixed fees decouple revenue from water consumption, but a returned machine earns nothing until redeployed. Office occupancy, route density and productivity across Quench's 500-plus technicians remain meaningful variables.	MEDIUM
New-unit / customer payback	Not estimated	Payback should shorten when recurring fees and units per customer are high relative to equipment, installation and acquisition cost, especially within dense routes and long-lived accounts. It should lengthen with plumbing complexity, frequent service, customer churn, idle redeployment time and low technician density.	LOW
B2B vs B2C	Predominantly B2B	The core model is predominantly B2B because Quench explicitly serves workplaces and directs residential users elsewhere. Primo broadens the universe into homes and other channels, but its exact filtration customer mix is undisclosed.	HIGH

WORKPLACE POU FILTRATION

Evidence. FY2019 is the last standalone period. Quench had about 160,000 units and 55,000-plus customers, or 2.9 units per account, with \$115.2 million revenue, \$32.4 million adjusted EBITDA, 13.6% organic growth, and six acquisitions. Current materials describe mainly month-to-month rental and included service. Current churn, replacement cycles, installed cost, unit contribution, and capex are unavailable, making capex and payback low-confidence.

Business. The relevant AquaVenture operation is Quench, excluding Seven Seas Water and desalination. Quench USA, Inc., now a Culligan subsidiary, installs company-owned filtration dispensers for institutional and commercial workplaces in the U.S. and Canada. Fixed-fee plumbed filtration replaces bottle storage, handling, and delivery.

Economics. The core unit is a machine; CAC and tenure sit at the customer location. Monthly rent includes maintenance and filters; installation may be separate. Multiple machines spread account setup cost. More than 500 technicians install, inspect, sanitize, change filters, and repair, making route density central. Working equipment, included service, predictable bills, and re-plumbing support retention; office closure, relocation, downsizing, hybrid work, rebids, and poor service cause churn. Returns require recovery, refurbishment, and reinstallation before earning again.

Primo Water

DIVERSIFIED WATER PLATFORM

Evidence. FY2023 combined Refill/Filtration revenue was \$226.9 million versus \$192.0 million, so filtration growth is not separable. Customer equipment had \$235.0 million net book value and 2-15-year lives but included many non-filtration assets. Cancellation is flexible. Filtration-only revenue, units, customers, churn, EBITDA, service cost, and capex are unavailable; Primo margin, capex, conversion, tenure, and payback are low-confidence.

Business. Primo Water's installed filtration offer now sits inside Primo Brands after the November 2024 transaction. It places company-owned carbon or reverse-osmosis systems in homes and businesses, with floor, countertop, and under-sink formats from \$27.99 monthly. It solves taste and convenience needs without bottle logistics or self-managed maintenance.

Economics. The core unit is a filtration system; the account governs CAC and cross-sell. Primo owns, installs, leases, maintains, filters, sanitizes, repairs, bills, and sometimes monitors devices. Rolling cancellation lowers sales friction but makes retention depend on convenience, service, price, moves, and cross-sell. Home/business reach reduces office concentration but fragments routes and creates internal purchase, refill, exchange, and delivery substitutes. Cancelled equipment must be recovered and redeployed.
