

Liquid Environmental Services Operating Benchmark

PAGE 1 | ESTIMATES

SUBVERTICAL LENS

Two models should remain separate: installed onsite oil systems and route-based collection, treatment and processing. Onsite embedding supports tenure; route density and owned treatment support margin, but increase fleet and plant utilization exposure.

METRIC	ESTIMATE	ASSERTION	CONFIDENCE
Revenue growth	Onsite 8% Route 9%	The 8% onsite estimate reflects installed-kitchen wins, pricing and throughput across RTI's 45,000-plus sites. The 9% route estimate reflects modestly greater upside from density, cross-sell and treatment throughput.	MEDIUM
EBITDA margin	Onsite 21% Route 28%	The 21% onsite estimate is mechanism-based because RTI has no standalone margin disclosure. The 28% route estimate is set below historical S&P commentary citing LES margins above 30%, allowing for dated evidence, mixed services and third-party disposal.	MEDIUM-LOW
Maintenance capex / revenue	Onsite Not estimated Route Not estimated	Onsite sustaining capital should rise with provider-owned tanks, pumps, filters and monitoring hardware, short replacement cycles and a dispersed installed base; it should fall with long-lived standardized systems, customer-funded installation and dense service routes. Route sustaining capital should rise with aging vacuum trucks, treatment-plant intensity, corrosive waste streams and environmental controls; it should fall with newer fleets, outsourced disposal and high throughput per asset. Neither segment discloses a clean sustaining-capex split, so neither is estimated.	LOW
Customer tenor INITIAL / EFFECTIVE	Onsite Not estimated Route Not estimated	Customer tenure should lengthen for onsite systems when provider-funded equipment, workflow integration and bundled monitoring, compliance and maintenance raise switching costs; it should shorten when customers own equipment, sites close or service fails. Route tenure should lengthen with recurring compliance needs, bundled services, dedicated capacity and reliable local processing, and shorten with per-pickup bidding, price competition and service failures. Neither segment discloses standard initial terms, churn cohorts or average customer life, so neither initial nor effective tenure is estimated.	LOW
Utilization exposure	Onsite Moderate Route Moderate-High	Onsite exposure is Moderate because deployed equipment remains in place, but gallons per kitchen and depot density affect economics. Route exposure is Moderate-High because stops per route, truck productivity and plant throughput determine contribution.	MEDIUM
New-unit / customer payback	Onsite Not estimated Route Not estimated	Onsite payback should shorten with low equipment and installation cost, high recurring contribution, multi-site wins, dense service routes and long retention, and lengthen with plumbing complexity, frequent service and early removals. Route-customer payback should shorten with low acquisition and container cost, high gallons per stop, dense routes, internal treatment and durable retention, and lengthen with long hauls, low volumes, third-party disposal and churn. Neither segment discloses cohort-level capital, contribution or acquisition-cost inputs, so neither is estimated.	LOW
B2B vs B2C	Onsite Predominantly B2B Route Predominantly B2B	Both archetypes are predominantly B2B because RTI serves commercial kitchens and institutions, while LES and WRM focus on commercial and industrial generators. Wind River's residential exposure does not change the route-processing center.	HIGH

Restaurant Technologies

INSTALLED ONSITE OIL SYSTEMS

Reference data. RTI serves 45,000-plus kitchens through 41 depots; about 60% of 2022 revenue was QSR-related, and S&P expected low-teens growth in 2018. RTI advertises average customer savings of \$250 and 9 labor hours per week; current margin, maintenance capex, contract terms and provider contribution are undisclosed.

Business. Installs automated cooking-oil systems and provides fresh-oil delivery, filtration, monitoring, used-oil removal, and recycling, solving kitchen labor, safety, quality, and disposal problems.

Economics. Unit: installed location; gallons measure usage and depot routes service capacity. Revenue mixes product, service, equipment, and recovery value. Equipment/workflow embedding retains customers; closures, operator changes, low throughput, service failures, or repricing cause churn.

Liquid Environmental Solutions

COMMERCIAL LIQUID-WASTE ROUTES

Reference data. LES expanded from 49 branches/20 recycling facilities historically and 54 branches/24 treatment plants in 2019 to 95 facility or partner sites and 129,500 customer locations by 2026. Historical S&P commentary cited ratings-adjusted EBITDA margins above 30%; current scale includes 670 field vehicles, versus 300-plus vacuum trucks in earlier releases.

Business. Collects, transports, treats, recycles, and disposes of grease, used oil, wastewater, grit, and related streams for commercial/industrial customers needing recurring sanitation and compliance.

Economics. Units: route customer for payback, truck/route for utilization, treatment plant for margin. Revenue mixes service, hauling, treatment/disposal, and recovery value. Plants and permits capture spread; recurring need, reliability, and processing access retain accounts.

Waste Resources Management

COMMERCIAL LIQUID-WASTE ROUTES

Reference data. WRM serves 10,000-plus clients in four states; a 2026 transaction adds 13 metros, and the company has 300-plus employees. Revenue, EBITDA, maintenance capex and contract terms are undisclosed; the McDonald Farms combination broadens the service mix beyond pure grease routes.

Business. Grease-centered platform collecting, processing, transporting, and recycling liquid waste while cross-selling jetting, trap repair, plumbing, septic, sludge, and remediation to commercial/institutional sites.

Economics. Unit: route customer linked to shared processing. Revenue mixes collection, treatment, recovery, transport, and field work. Vertical integration and bundled reliability retain accounts; switching remains easier than onsite equipment. Capital includes vacuum trucks, specialty units, pumps, tanks, and processing assets.

Wind River Environmental

DIVERSIFIED WASTEWATER SERVICES

Reference data. Wind River has 1,000 vehicles and 16 plants processing 200 million-plus gallons annually across 16 states, plus 90-plus acquisitions and a 75-plus-year operating legacy. It explicitly serves residential and commercial customers; revenue, EBITDA, maintenance capex and contract terms are undisclosed.

Business. East Coast consolidator spanning residential septic, commercial grease, plumbing/drains, municipal-industrial wastewater, specialty services, and treatment management, solving backup, compliance, and downtime risks.

Economics. Unit: route/service customer; plants drive network margin. Revenue mixes routes, septic cycles, emergencies, and projects. Local trust, recurring need, disposal access, and response retain customers; service inconsistency, competition, and integration cause churn.
